

## **Exactech Launches Next-Generation Technology for ExactechGPS®**

*Strengthens Active Intelligence® Smart Solutions*

**GAINESVILLE, Fla. (Jan. 21, 2021)** – Exactech, a developer and producer of innovative implants, instrumentation and smart technologies for joint replacement surgery, announced today the launch of next-generation hardware and software for its ExactechGPS® guided personalized surgery system. These new developments further enhance the only navigation system available for knee and shoulder surgery which serves as the foundation of the company's Active Intelligence® technology platform.

ExactechGPS now features wireless connectivity for more seamless, interconnected data, case management and technology integration. The hub of the Active Intelligence platform, ExactechGPS connects surgeons and patients with smart decisions throughout the journey of care. In addition, new proprietary camera technology provides state-of-the-art visibility and stability, allowing straightforward integration into surgeon-specific workflows and O.R. setups. These enhancements, combined with the Active Intelligence connectivity, patient monitoring and predictive solutions, will unlock patient-specific insights never before available.

With the addition of these design features, ExactechGPS continues to be available with no capital expense, allows the surgeon full control and accessibility within the sterile field, and maintains a small footprint which makes it amenable to ambulatory surgery centers. ExactechGPS currently supports both knee and shoulder applications, with future expansion planned.

Surgeons in France and the United States have reported excellent experience from the first surgeries performed with the upgraded system. Orthopaedic surgeon Pierre-Henri Flurin, MD, recently completed the first case in Europe. Kansas surgeons Scott Adrian, MD, and Jacob Deister, MD, performed the first cases using the new system in the United States last week.

According to Dr. Adrian, "As a young orthopaedic surgeon, ExactechGPS gave me confidence in my implant placement, and that I was providing the best care possible for my patient."

Dr. Desiter reported, "I like tools that make an operation better. I've been using ExactechGPS for 3 years now, in close to 500 surgeries. It just works well, and the upgrades are valuable additions that continue to give me confidence and eliminate uncertainty during complicated joint replacements."

The majority of these upgrades will be applied to existing ExactechGPS systems around the globe at no charge throughout 2021.

### **About Exactech**

Exactech is a global medical device company that develops and markets orthopaedic implant devices,-related surgical instruments and the Active Intelligence® platform of smart technologies to hospitals and physicians. Headquartered in Gainesville, Fla., Exactech markets its products in the United States, in addition to more than 30 markets in Europe, Latin America, Asia and the Pacific.
