

Exactech Announces Full Launch of its Truliant® Porous Knee System

Porous Technology Expands Options for Patients, Broadens Knee Replacement Offerings for Surgeons

GAINESVILLE, FLA. (Aug. 12, 2021) – Exactech, a developer and producer of innovative implants, instrumentation and smart technologies for joint replacement surgery, today announced the expansion of its Truliant® Total Knee System with a new porous-coated implant option. Full launch of the [Truliant Porous Knee](#) is welcome news for surgeons who are interested in a non-cemented approach. It enhances the award-winning knee system and is designed for strength and stability for patients, and efficiency for surgeons and staff in the operating room.

“Exactech’s Truliant Porous Knee embodies state-of-the-art technology, manufacturing and instrumentation allowing surgeons to confidently address our ever-changing patient populations,” said James B. Duke, MD, of the Orthopaedic Institute in Ocala, Fla. “I believe surgeons looking to maximize longevity, performance and durability in their implants will want to utilize Exactech’s Truliant Porous Knee technology to best handle surgical challenges and patient expectations.”

The Truliant Porous Knee enhances the company’s advanced material science platform with a solution that is designed to mimic the trabecular nature of cancellous bone with optimal pore size and porosity. The porous structures integrated into the implant design are designed to facilitate a durable bonding surface to allow for immediate and long-term biological fixation. Peripheral pegs allow for stable initial fixation while the channeled keel is designed with flutes to increase bony-implant engagement for increased stability and resistance to micromotion. The Truliant Porous Knee seamlessly integrates with the system’s ergonomically designed mechanical instrumentation and the [ExactechGPS® TKA Pro application](#) for a guided,

personalized experience. The Truliant Total Knee System includes cruciate-retaining and posterior-stabilized implants, as well as constrained insert options, and integrates with a fully comprehensive revision system that offers metaphyseal cones, stems, tibial augments and offsets.

The Truliant Porous Knee is fully available in the US. For more information about Truliant Porous, visit www.exac.com/porous.

About Exactech

Exactech is a global medical device company that develops and markets orthopaedic implant devices, related surgical instruments and the Active Intelligence® platform of smart technologies to hospitals and physicians. Headquartered in Gainesville, Fla., Exactech markets its products in the United States, in addition to more than 30 markets in Europe, Latin America, Asia and the Pacific.
