

Plan Your Future. **And Control It.**

From preoperative planning to real-time execution.

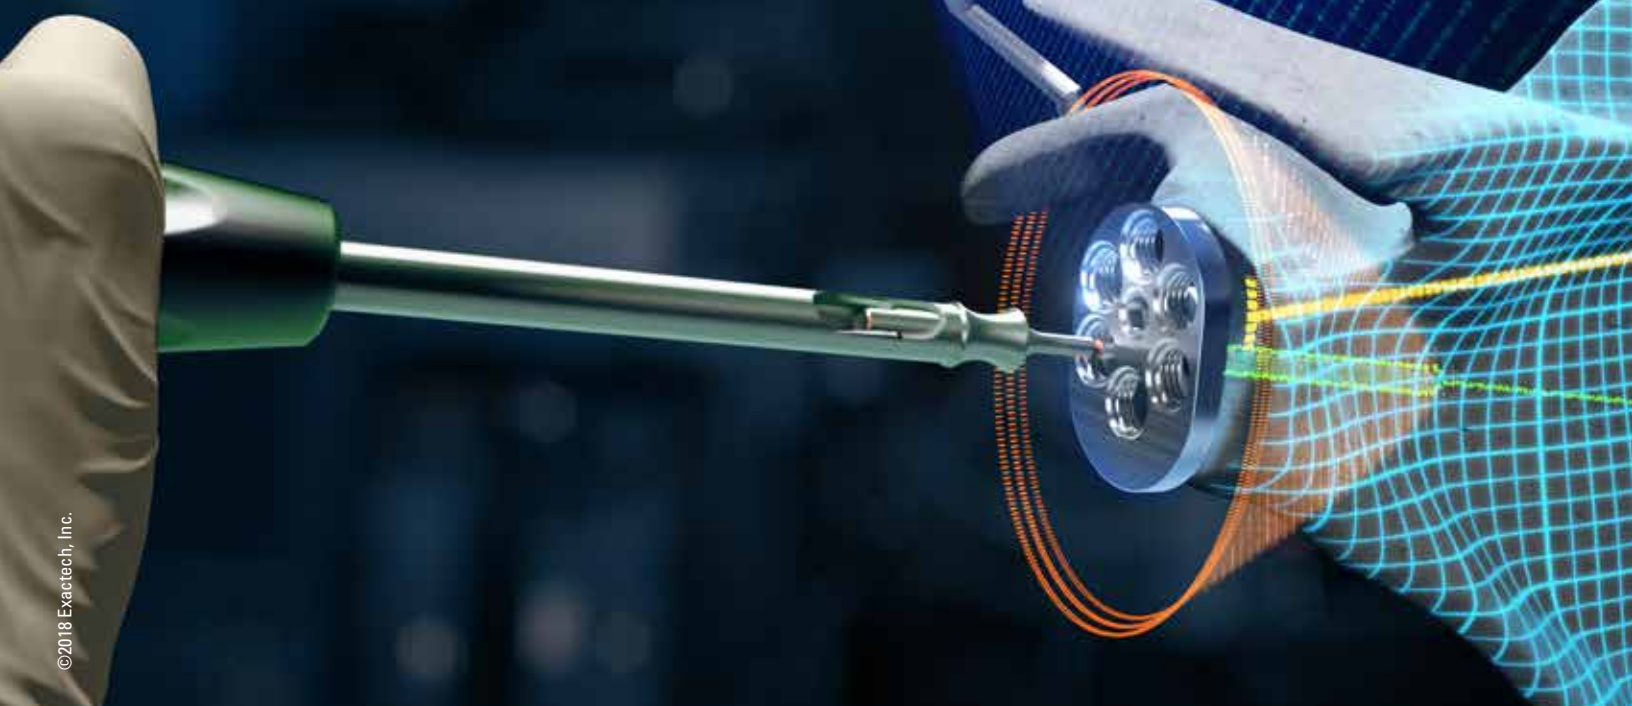

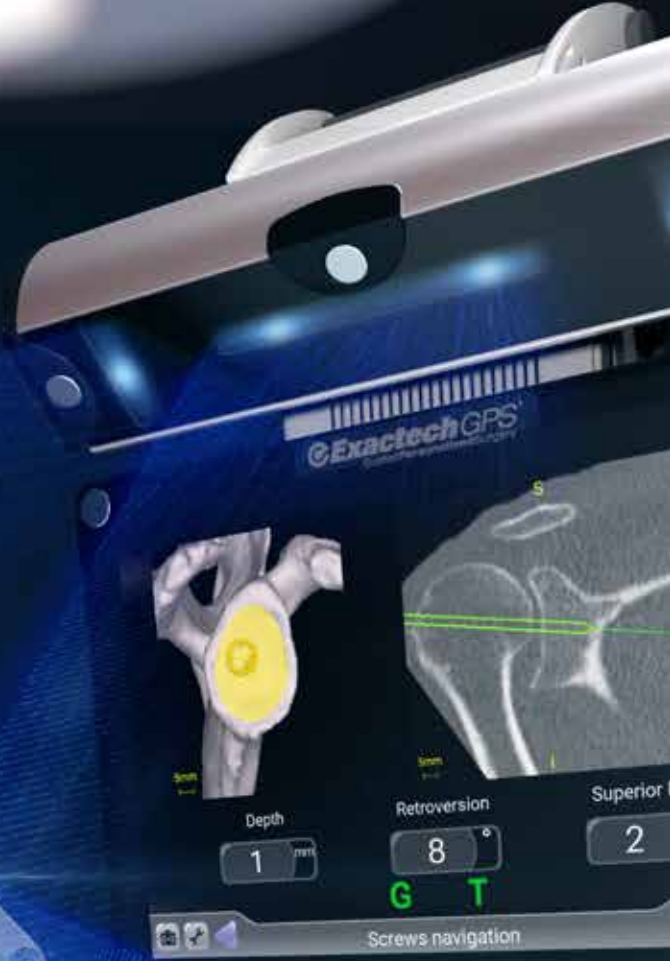

The **Equinox**® Planning App software immediately reconstructs the scapula in 3D, enabling implant selection and placement prior to surgery.

To unlock the full advantage of the Planning App, use it with the only globally launched shoulder navigation technology available. The **ExactechGPS**® Shoulder Application is designed to reproduce the preoperative plan with precise execution intraoperatively. The system provides live feedback, allowing you to control adjustments to the surgical plan in the O.R.

Contact us to learn more about how these Augmented Orthopaedics™ technologies can enhance your surgical experience.

ExactechGPS
Guided Personalized Surgery

Available for use exclusively with the **Equinox**® Platform Shoulder System, including its comprehensive glenoid solutions.
